Self introduction

- MPhil in Economics, Year 1 student @ CUHK
- Like programming and the concept of open source
- Part-time teaching assistant
- Assisted teaching of Python for UG students majoring in Economics @ CUHK

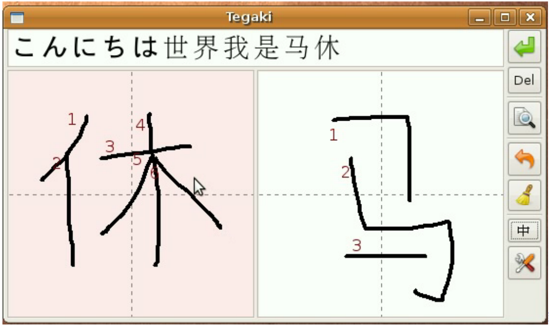
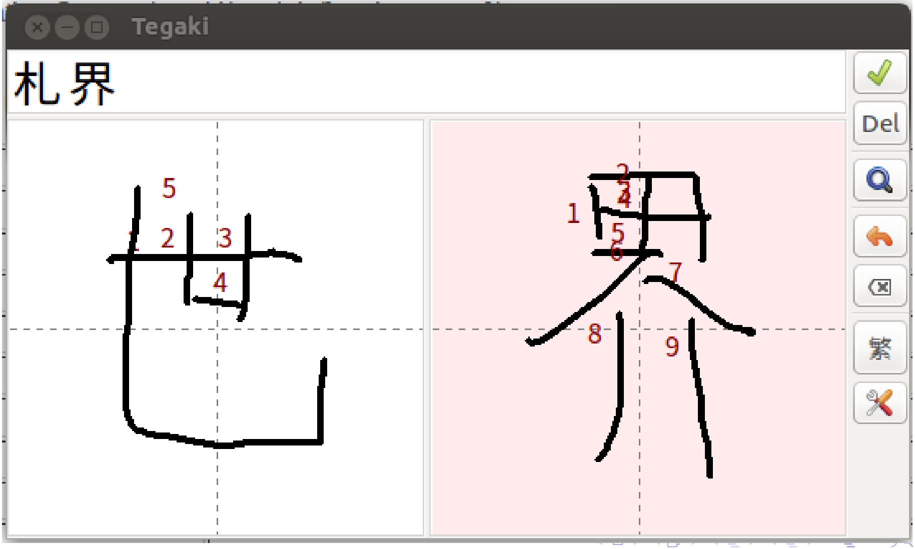
Discovery of Tegaki Project

- Under Linux, I mostly use ibus-table-cangjie3 to type Chinese
- But, sometimes, I do not know how to type some Chinese characters in cangjie3
- Only when I can connect to the Internet, I can use http://hanzi.unihan.com.cn/Qpen instead
- Tegaki [1] is an open-source, local Chinese and Japanese handwriting recognition system

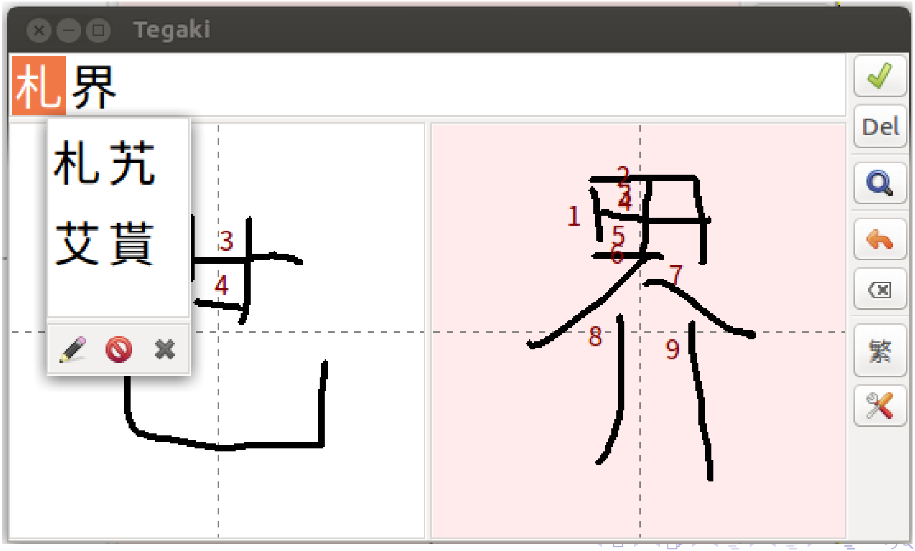


Problem: Bad Chinese (traditional) handwriting recognition I

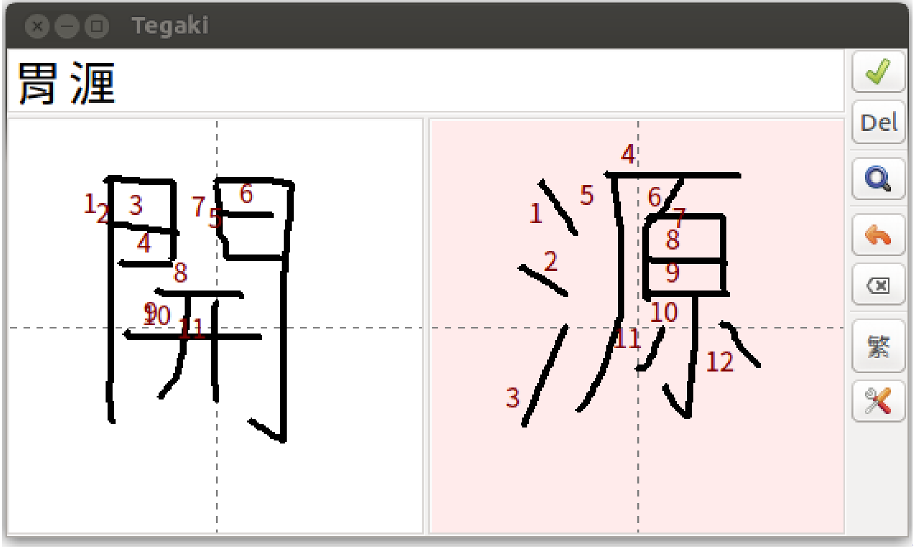


札界

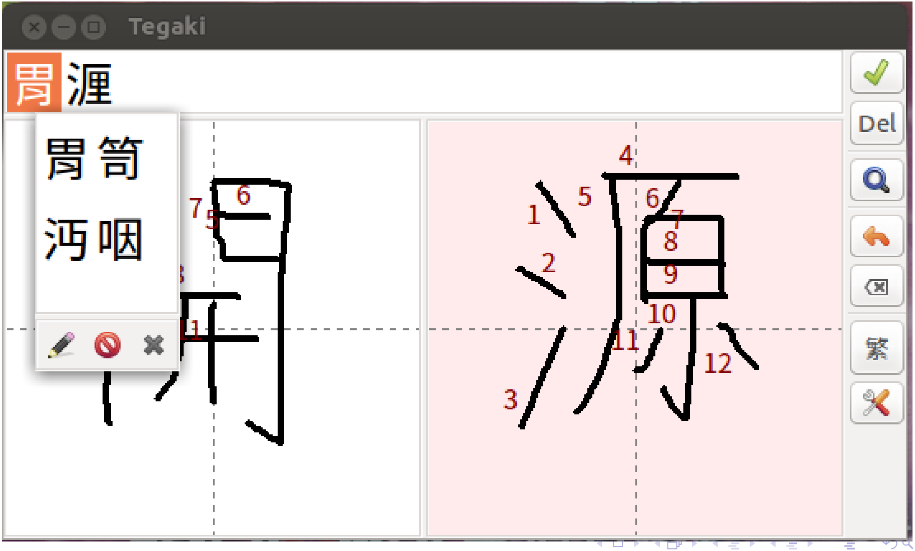
Problem: Bad Chinese (traditional) handwriting recognition II



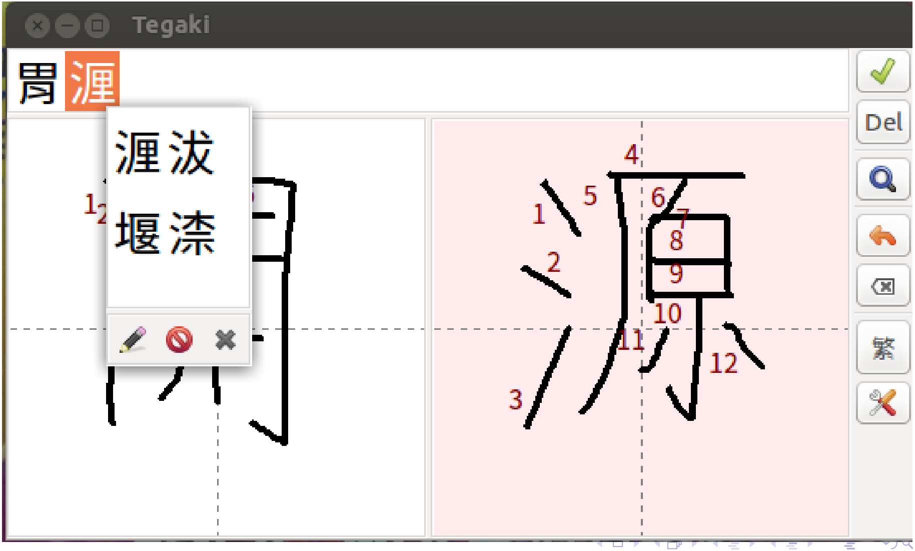
Problem: Bad Chinese (traditional) handwriting recognition III



Problem: Bad Chinese (traditional) handwriting recognition IV



Problem: Bad Chinese (traditional) handwriting recognition V

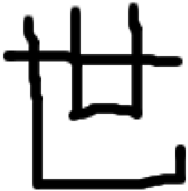


Solution: Use tesseract

- Traditional Chinese model (Zinnia engine) available at https://github.com/tegaki/tegaki/releases/download/v0.3/tegaki-zinnia-traditional-chinese-0.3.zip is used
- The model seems to use rare Chinese characters for training, resulting in poor recognition
- Tesseract OCR [2] seems to be much better

Testing tesseract I

Input:



Output:

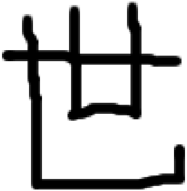
●

Command:

```
tesseract world.png out -l chi_tra -psm 10
```

Testing tesseract II

Input:



Output:

世

Command:

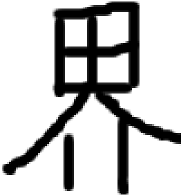
```
tesseract world.png out -l chi_tra -psm 6
```

Tesseract: psm

-psm N
Set Tesseract to only run a subset of layout analysis and assume a certain form of image. The options for N are:
0 = Orientation and script detection (OSD) only.
1 = Automatic page segmentation with OSD.
2 = Automatic page segmentation, but no OSD, or OCR.
3 = Fully automatic page segmentation, but no OSD. (Default)
4 = Assume a single column of text of variable sizes.
5 = Assume a single uniform block of vertically aligned text.
6 = Assume a single uniform block of text.
7 = Treat the image as a single text line.
8 = Treat the image as a single word.
9 = Treat the image as a single word in a circle.
10 = Treat the image as a single character.

Testing tesseract III

Input:



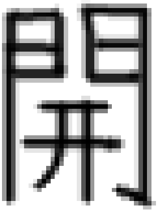
Output:

界

Command:
tesseract world2.png out -l chi_tra -psm 10

Testing tesseract IV

Input:



Output:

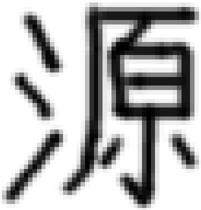
開

Command:

```
tesseract openhw2.png out -l chi_tra -psm 10
```

Testing tesseract V

Input:



Output:

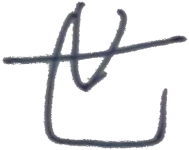
源

Command:

```
tesseract sourcehw.png out -l chi_tra -psm 10
```

Testing tesseract VI

Input:



Output:

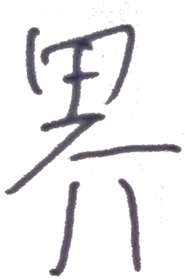
芭

Command:

```
tesseract worldrhwo.png out -l chi_tra -psm 10
```

Testing tesseract VII

Input:



Output:

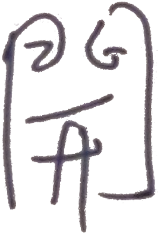
縉

Command:

```
tesseract world2rhw.png out -l chi_tra -psm 10
```

Testing tesseract VIII

Input:



Output:

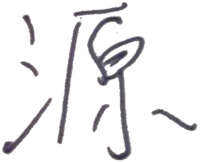
闌

Command:

```
tesseract openrhw.png out -l chi_tra -psm 10
```

Testing tesseract IX

Input:



Output:

腮

Command:

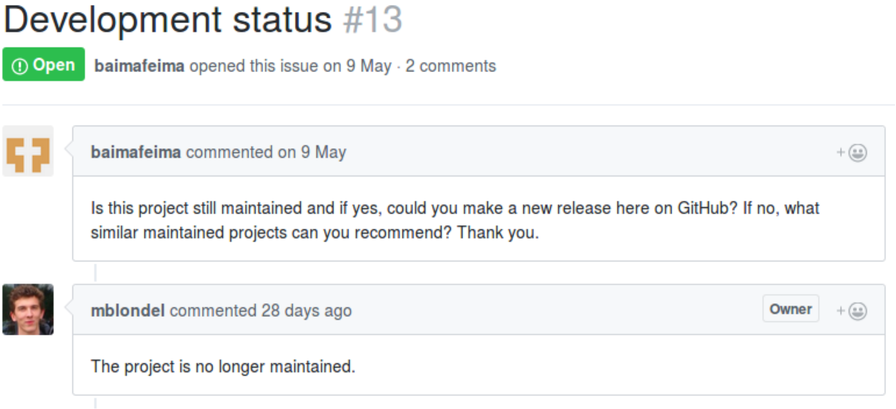
```
tesseract sourcerhw.png out -l chi_tra -psm 10
```

A lesson

Think about alternatives

My plan

- Improve tesseract's Chinese (traditional) handwriting recognition
- Integrate tesseract into tegaki?



Development status #13

Is this project still maintained and if yes, could you make a new release here on GitHub? If no, what similar maintained projects can you recommend? Thank you.

mblondel commented 28 days ago Owner

The project is no longer maintained.
